Vendor: Microsoft Exam Code: 70-640 Exam Name: TS: Windows Server 2008 Active Directory, Configuring Version: 14.91

QUESTION 501 Your network contains an Active Directory forest named contoso.com. The functional level of the forest is Windows Server 2008 R2. You have four Active Directory sites. Each site has multiple Active Directory subnets. You need to identify all of the authentication requests that originate from client computers that are not associated to an Active Directory subnet. What should you use? A. The %Systemroot%System32Network_lu.log log file B. The %Systemroot%DebugNetsetup.log log file C. The Authentication User Interface operational log D. The %Systemroot%DebugNetlogon.log log file Answer: B

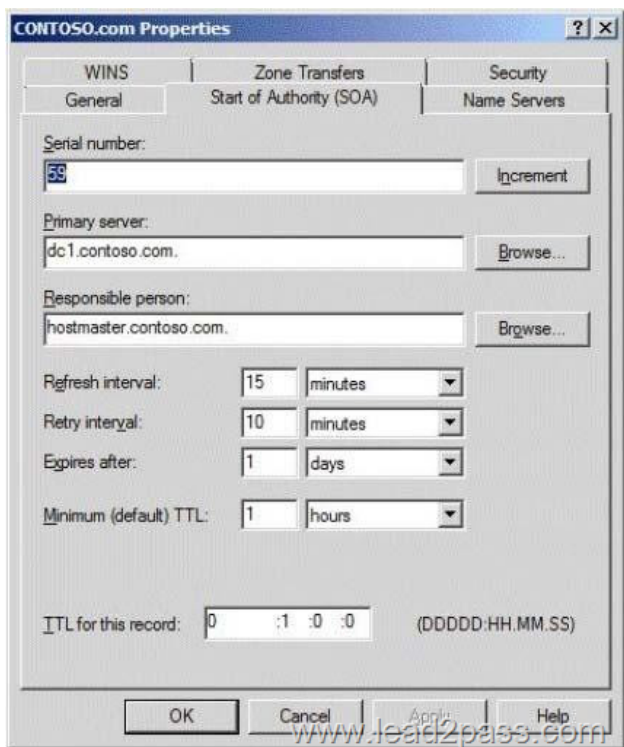

QUESTION 502 Your network contains an Active Directory domain. The domain contains five sites. One of the sites contains a read-only domain controller (RODC) named RODC1. You need to identify which user accounts can have their password cached on RODC1. Which tool should you use? A. Get-ADFineGrainedPasswordPolicy B. Dcdiag C. Get-ADDomamControllerPasswordReplicationPolicy D. Get-ADAccountResultantPasswordReplicationPolicy Answer: C

QUESTION 503 Your network contains an Active Directory domain. The domain is configured as shown in the exhibit. (Click the Exhibit button.)

You have a Group Policy object (GPO) linked to the domain. The GPO is used to deploy a number of software packages. You need to ensure that the GPO is applied only to client computers that have sufficient free disk space. What should you do? A. Modify the Group Policy permissions. B. Enable block inheritance. C. Configure the link order. D. Enable loopback processing in merge mode. E. Enable loopback processing in replace mode. F. Modify the Group Policy permissions. G. Enable block inheritance. H. Configure the link order. I. Enable loopback processing in merge mode. J. Enable loopback processing in replace mode. Answer: F

QUESTION 504 Your network contains an Active Directory domain named contoso.com. All servers are located in the same Active Directory site. The domain contains two domain controllers named DC1 and DC2. Both domain controllers host an Active Directory-integrated zone for contoso.com. The Start of Authority (SOA) record of the contoso.com zone is shown in the exhibit. (Click the Exhibit button.)

You have a member server named Server1. Server1 hosts a secondary zone of contoso.com. On DC1, you add a new record to the contoso.com zone. In the table below, identify the maximum amount of time required to replicate the record to each server. Make only one selection in each column.

	Maximum time to replicate to DC2	Maximum time to replicate to Server1
Less than one minute	<input type="radio"/>	<input type="radio"/>
15 minutes	<input type="radio"/>	<input type="radio"/>
25 minutes	<input type="radio"/>	<input type="radio"/>
One hour	<input type="radio"/>	<input type="radio"/>
One day	<input type="radio"/>	<input type="radio"/>

Answer:

	Maximum time to replicate to DC2	Maximum time to replicate to Server1
Less than one minute	<input checked="" type="radio"/>	<input type="radio"/>
15 minutes	<input type="radio"/>	<input checked="" type="radio"/>
25 minutes	<input type="radio"/>	<input type="radio"/>
One hour	<input type="radio"/>	<input type="radio"/>
One day	<input type="radio"/>	<input type="radio"/>

QUESTION 505 You have an Active Directory domain named contoso.com. You need to view the account lockout threshold

and duration for the domain. Which tool should you use? A. Get-ItemProperty B. Active Directory Domains and Trusts C. Net User D. Gpresult Answer: C

QUESTION 506 Your network contains an Active Directory domain named litwareinc.com. The domain contains two sites named Site1 and Site2. Site2 contains a read-only domain controller (RODC). You need to identify which user accounts attempted to authenticate to the RODC. Which tool should you use? A. Repadmin B. Dcdiag

C. Get-ADAccountResultantPasswordReplicationPolicy D. Active Directory Sites and Services Answer: A QUESTION 507 Your network contains an Active Directory forest named contoso.com. The functional level of the forest is Windows Server 2008 R2. The DNS zone for contoso.com is Active Directory-integrated. You deploy a read-only domain controller (RODC) named RODC1. You install the DNS Server server role on RODC1. You discover that RODC1 does not have any DNS application directory partitions. You need to ensure that RODC1 has a copy of the DNS application directory partition of contoso.com. What should you do? A. From DNS Manager, right-click RODC1 and click Create Default Application Directory Partitions. B. From DNS Manager, create primary zones. C. Run ntdsutil.exe. From the Partition Management context, run the create nc command. D. Run dnscmd.exe and specify the /enlistdirectorypartition parameter. Answer: A

QUESTION 508 Your network contains an Active Directory domain named contoso.com. You have a comma separated value (CSV) file named Users.txt. Users.txt contains the information for 500 users and all of the attributes required to create user accounts. You plan to automate the creation of user accounts by using the Users.txt file. You need to identify which two cmdlets you must run. The solution must pipe the output from the first cmdlet to the second cmdlet. What should you run from Windows PowerShell? To answer, configure the appropriate PowerShell command in the answer area.

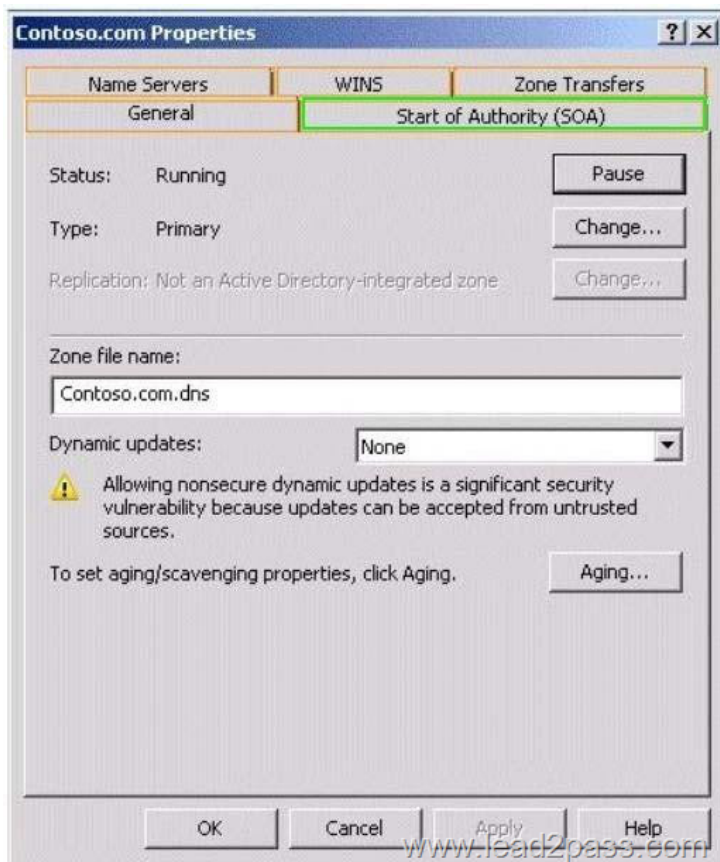

QUESTION 509 Your network contains an Active Directory domain named contoso.com. You have an organizational unit (OU) named Sales and an OU named Engineering. You have two Group Policy objects (GPOs) named GPO1 and GPO2. GPO1 and GPO2 are linked to the Sales OU and contain multiple settings. You discover that GPO2 has a setting that conflicts with a setting in GPO1. When the policies are applied, the setting in GPO2 takes effect. You need to ensure that the settings in GPO1 supersede the settings in GPO2. The solution must ensure that all non-conflicting settings in both GPOs are applied. What should you do?

A. Modify the Group Policy permissions. B. Enable block inheritance. C. Configure the link order. D. Enable loopback processing in merge mode. E. Enable loopback processing in replace mode. F. Configure WMI filtering. G. Configure Restricted Groups. H. Configure Group Policy Preferences. I. Link the GPO to the Sales OU. J. Link the GPO to the Engineering OU. Answer: C

QUESTION 510 You have a standard primary zone named contoso.com. You need to configure how often the zone will be transferred to servers that host a secondary copy of the zone. Which tab should you use? To answer, select the appropriate tab in the answer area.

Answer:

If you want to pass Microsoft 70-640 exam successfully, don't miss to read latest lead2pass Microsoft 70-640 dumps. If you can master all lead2pass questions you will be able to pass 100% guaranteed. <http://www.lead2pass.com/70-640.html>
